

Welcome to the Interoperability Workshop

Dallas, Texas
11 April 2007

PNNL-SA-54816

A. PICCARD E. HENRIOT P. EHRENFEST Ed. HERZEN Th. DE DONDER E. SCHRÖDINGER E. VERSCHAFFELT W. PAULI W. HEISENBERG R.H. FOWLER L. BAILLOUIN
P. DEBYE M. KNILSEN W.L. BRAGG H.A. KRAMERS P.A.M. DIRAC A.H. COMPTON L. de BROGLIE M. BORN N. BOHR
I. LANGMUIR M. PLANCK Mme. CURIE H.A. LORENTZ A. EINSTEIN P. LANGEVIN C.E. GUYE C.T.R. WILSON O.W. RICHARDSON

Opening Session

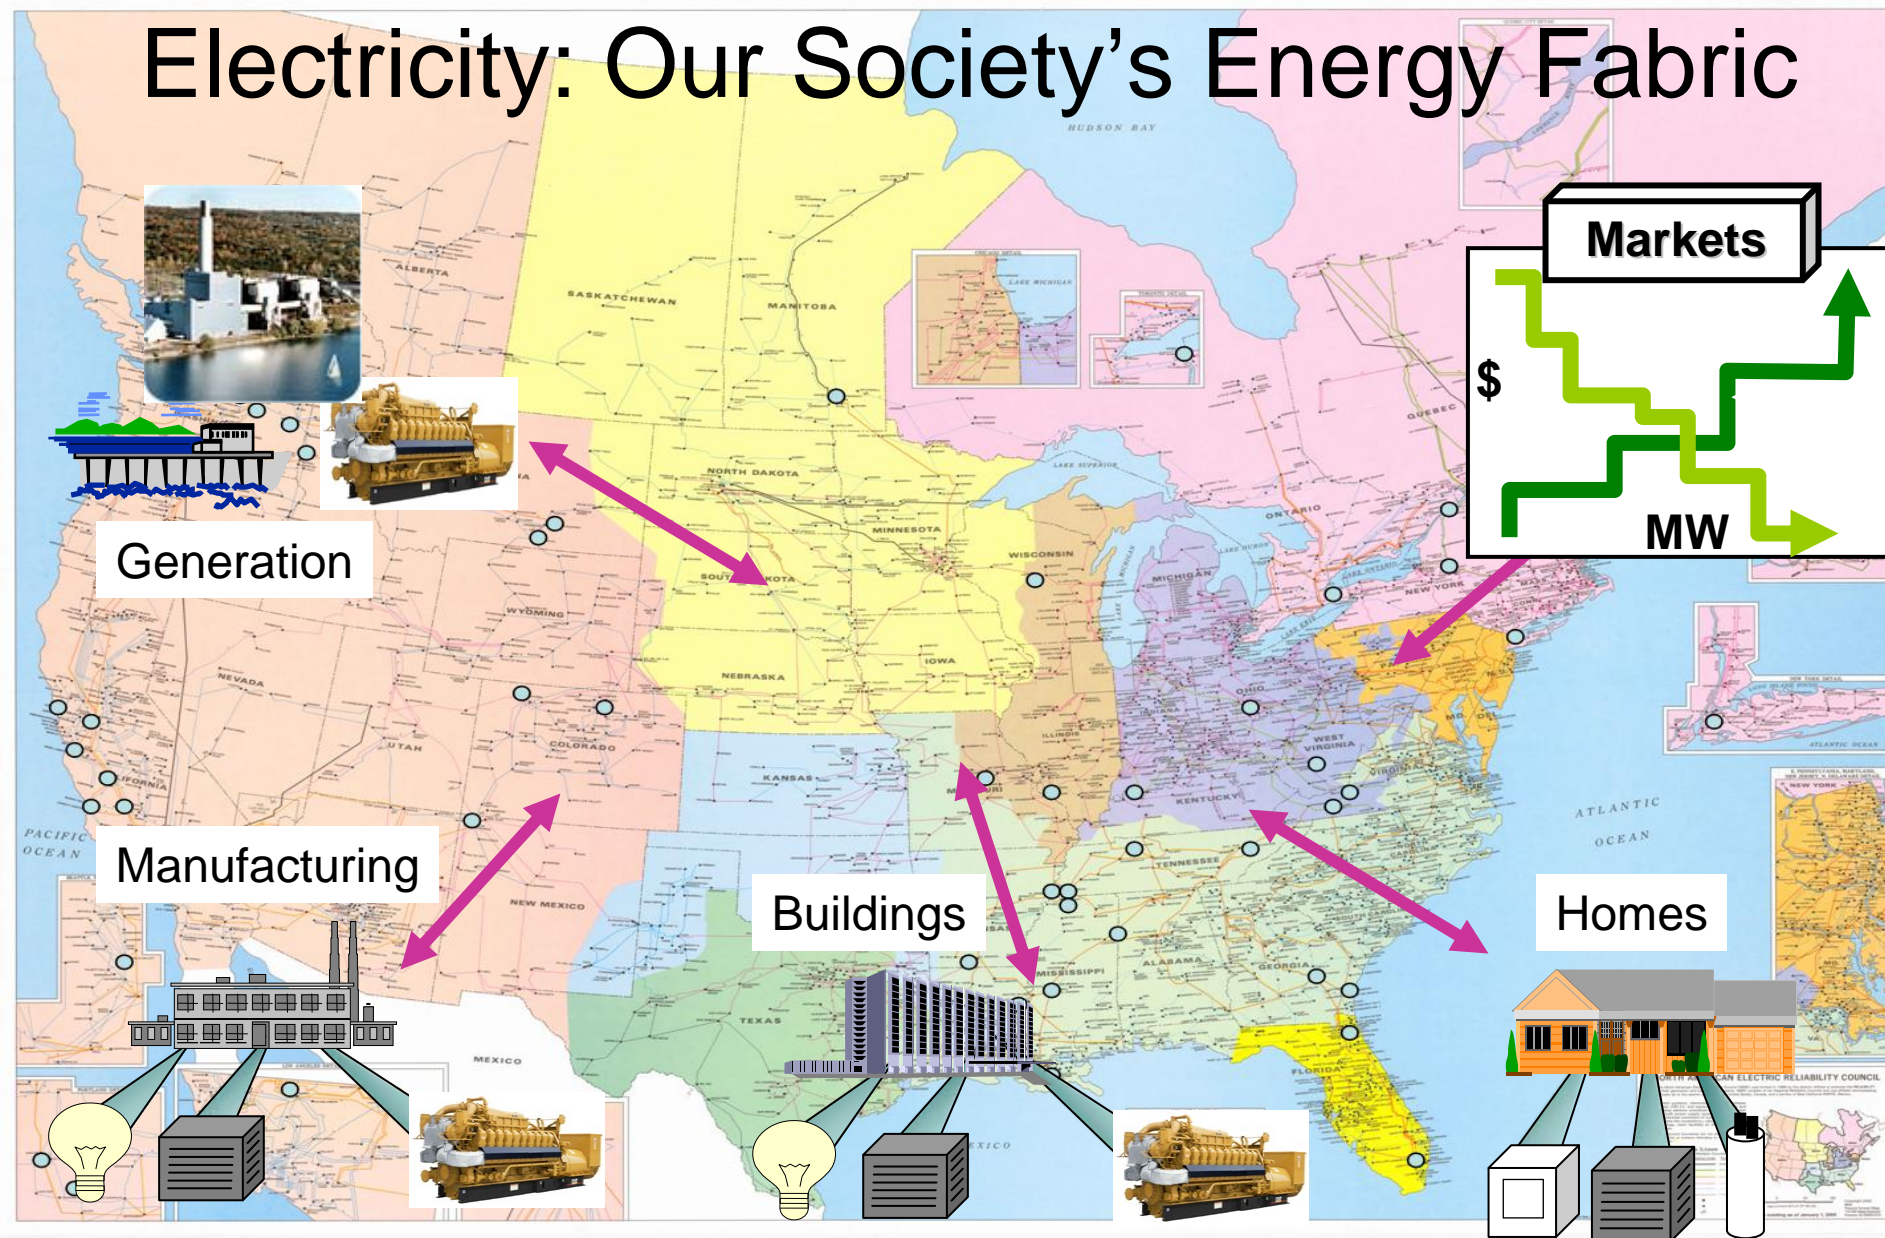

- Welcome
 - Jack McGowan, Chair GWAC
- Keynote
 - Kelly McNair, Dir. Information Mgmt, TXU ED
- Introductions
- Workshop Briefing
 - Andreas Tolk, Old Dominion University
 - Steve Widergren, PNNL

Interoperability Workshop Briefing

Topics

- Why are we holding this workshop?
- A context-setting framework
- Our agenda
- Test drive scenarios
 - Toby Considine, University of No. Carolina
 - Lots-O-Alarms home security & green energy
 - David Holmberg, NIST
 - Commercial buildings & real-time electricity pricing

Electricity: Our Society's Energy Fabric

● Becoming Interconnected

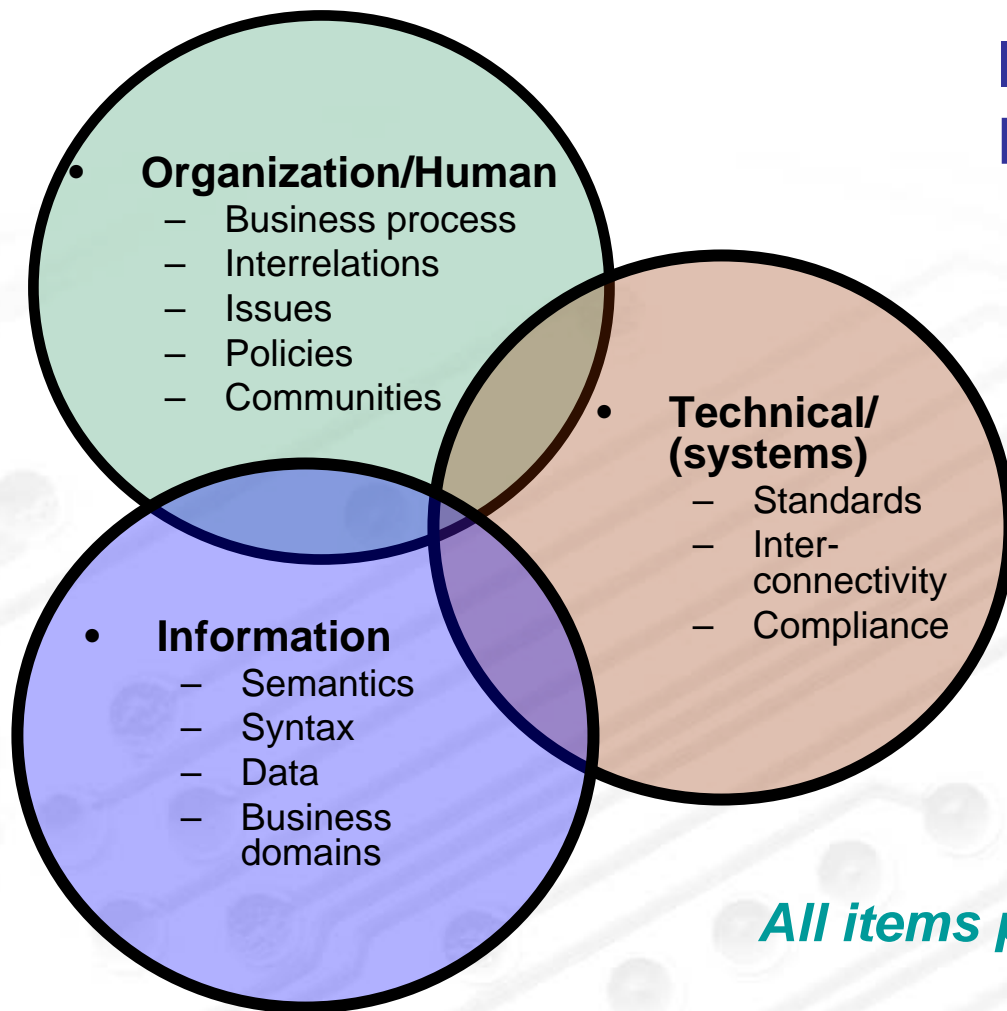

Frequency in Ontario and New York during Breakup

- Niagara Generation Stays with Western NY

GWAC Mission - Interoperability

Interoperable Software - Expected Impact:

- Reduces integration cost
- Reduces cost to operate
- Reduces capital IT cost
- Reduces installation cost
- Reduces upgrade cost
- Better security management
- More choice in products
- More price points & features

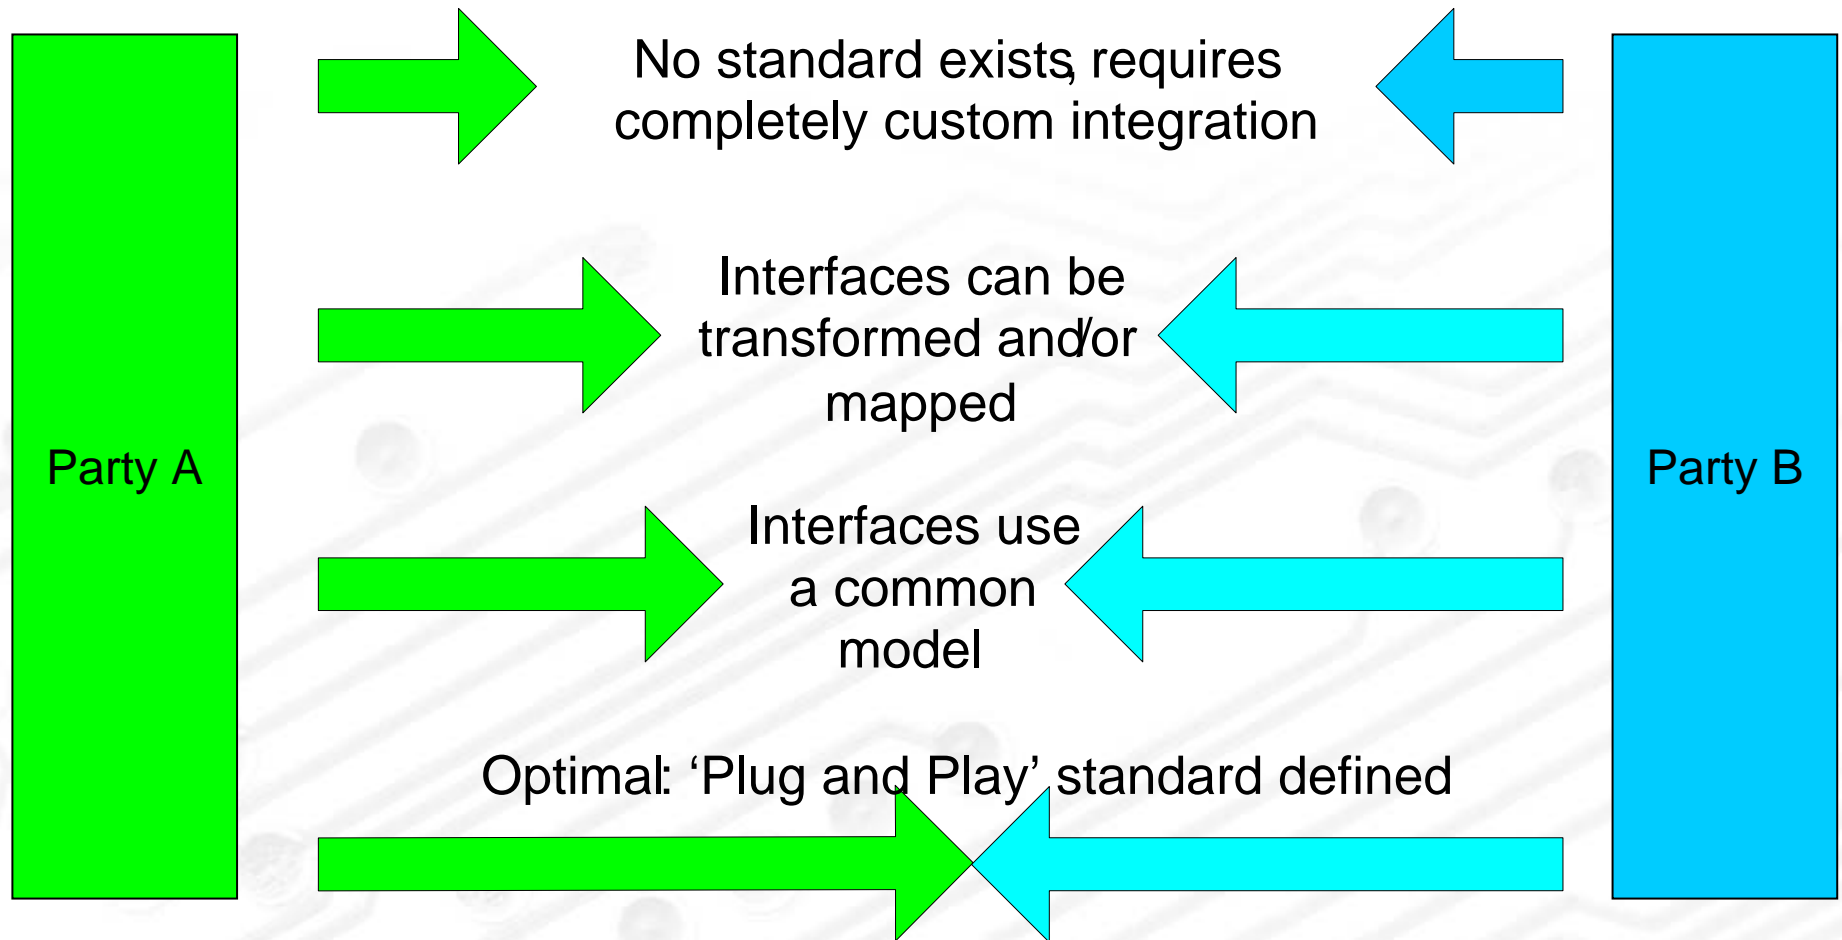

All items provide compounding benefits

● *Inter*operability – Integration at Arm's Length

- Exchange of actionable information
 - between two or more systems
 - across organizational boundaries
- Shared meaning of the exchanged information
- Agreed expectation with consequences for the response to the information exchange
- Requisite quality of service in information exchange
 - reliability, fidelity, security

Distance to Integrate

Interoperability Path Forward

Standards Organizations: a Tangled Web

The Framework: Context for Interoperability Dialog

● Interoperability Framework

- Organizing concepts
 - Taxonomy, definitions, levels, tenets
- Attempts to simplify the complex
 - Warning – it's still complex
- Aids communication between community members
 - Careful – semantics remain a stumbling block
- Provides perspective from selected viewpoints
- Reveals points where agreement simplifies integration
- Focus plight of integrator, not component developer

What do we mean by “Framework”?

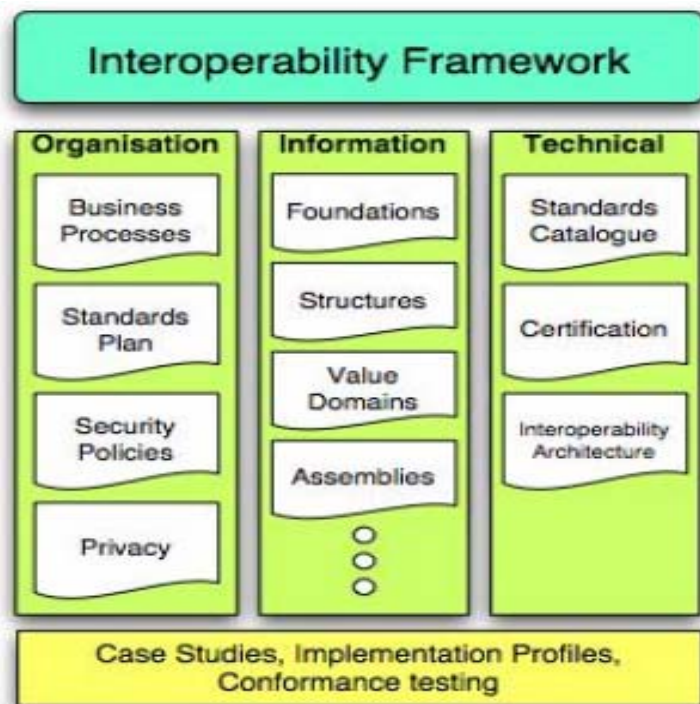

- *Framework* organizes concepts and provides context for discussion of detailed technical aspects of interoperability
- *Model* identifies a particular problem space and defines a technology independent analysis of requirements
- *Design* maps model requirements into a particular family of solutions
 - Uses standards and technical approaches
- *Solution* manifests a design into a particular developer software technology
 - Ensures adherence to designs, models, and frameworks.

Interoperability Context-Setting Framework

Interoperability Categories

Cross-cutting Issues

↑	↑	↑	↑	↑	↑	↑	→	→	↑
Shared Meaning of Content	Resource Identification	Time Synch & Sequencing	Security & Privacy	Logging & Auditing	Transaction & State Mgt	System Preservation	Performance/Reliability/Scalability	Discovery & Configuration	System Evolution
↓	↓	↓	↓	↓	↓	↓	←	←	←

System Integration Tenets

- Agreement at the interface
 - Create an interaction contract
 - Terms and conditions, consequences for failure to perform...
- Boundary of authority
 - Respect privacy of internal aspects on either side of the interface (technology choice and processes) – Principle B01
- Decision making in very large networks
 - Decentralized/autonomous decision-making
 - Multi-agent v. hierarchical approach
 - Addresses scalability, evolutionary change, and eases component integration

Multiple Audiences

- Interoperability Framework Document
 - Experts familiar with large system integration and interoperability issues
 - Does not replace enterprise architecture frameworks (e.g., DoDAF, TOGAF, Zachman, etc.)
 - Layers and crosscutting issues support various views / approaches
- Other targeted material
 - Audiences: designers, business decision-makers, policymakers, across various industry sectors
 - Checklists (tests/reminders)
 - White papers
 - Cross-cutting issue papers

Some already identified Challenges

White Paper Contributions and
Discussions

How many Standards are enough?

- Do we need standards?
- Are there upper and lower bounds?
- Do we need meta-standards and mapping to applicable standards?
- Should standards be mandated or recommended?
- When does an accepted solution become a standard and who owns the standard?
- How do we ensure that standards doesn't hinder progress?

How do we migrate?

- Architecture view
 - From the As-is-Architecture migrating to the To-Be-Architecture
 - What Architecture Frameworks are applicable
 - DoDAF derivatives (ATAM)
 - TOGAF
 - OPM (D. Dori)
 - SysML
- How to connect organizational procedures with technical solutions?

Verification and Validation

- Are we doing the right thing?
- Are we doing the thing right?
- What are our Measures of Merit on the various levels and overall?
- How do we ensure quality on the various levels and overall?

Securing the Critical Infrastructure

- System internal challenges
 - Non-linear complex system (chaos and catastrophe theory)
 - Redundancies and alternatives
- System external challenges
 - Natural disasters (hurricane, flooding, ...)
 - Hacker and Terror attacks
- Political challenges
 - International collaborations
 - How does the Grid behave at the border?

The Workshop

Workshop Desired Outcomes

Objective: *Consensus building forum for the preparation of community involvement to improve integration of emerging automation systems related to all elements of the electric system.*

- Consensus on interoperability framework paper
 - Actions to improve the paper
 - Develop credibility to framework paper
- Champions for articulating and addressing interoperability issues
- Leaders for a follow-on symposium

Workshop Sessions Wed.

- 10:30 am Framework Breakout Sessions
Raise document issues and proposed improvements
Themes (inspired by the document organization)
- Technical interoperability
 - Informational interoperability
 - Organizational interoperability
 - Cross-cutting issues
 - Overall framework structure & philosophical tenets

12:00 pm Lunch

1:00 pm Resume Framework Breakouts

4:30 pm Assembly for Quick Summary

5:00 pm Adjourn Breakout Meetings for the day

6:00 pm Reception and Networking

Workshop Sessions Thurs.

- | | |
|----------|---|
| 8:00 am | Welcome Back and Breakout Presentation Results |
| 9:00 am | Summary, General Discussion and Instructions for Next Breakout Sessions |
| 10:00 am | Interoperability Next Steps Breakout Sessions <ul style="list-style-type: none">- Resolve open issues for framework document- Address focus questions concerning impediments and actions to improve interoperability |
| 12:00 pm | Working Lunch |
| 1:00 pm | Resume Next Steps Breakouts <ul style="list-style-type: none">- Address focus questions: a symposium to engage the electricity community in articulating interoperability issues, proposing actions to improve the situation, other events/activities |
| 2:30 pm | Group Review on Breakout Results |
| 4:30 pm | Meeting adjourns |

Test Drive Scenarios
